

ARCUSAFLEX-VSK

Highly-flexible U-joint coupling for drive shafts

www.reich-kupplungen.com

SIMPLY POWERFUL.

D2C – Designed to Customer

The guiding principle of Designed to Customer is the recipe for success behind REICH. In addition to the catalog products, we supply our customers with couplings developed to their specific requirements.

The designs are mainly based on modular components to provide effective and efficient customer solutions.

The special nature of our close cooperation with our partners ranges from; consulting, development, design, manufacture and integration to existing environments, to customer-specific production, logistics concepts and after-sales service - worldwide.

This customer-oriented concept applies to both standard products and production in small batch sizes.

The company policy at REICH embraces, first and foremost, principles such as customer satisfaction, flexibility, quality, prompt delivery and adaptability to the requirements of our customers.

REICH provides you with not only a coupling, but a solution:

Designed to Customer – SIMPLY **POWERFUL**.

ARCUSAFLEX-VSK

General Technical Description

ARCUSAFLEX-VSK

Highly-flexible U-joint coupling for drive shafts

Drive shafts are used in a drive train when a large shaft displacement or an extended distance between the drive and the driven components must be compensated. Depending on the arrangement of the drive train components, a non-uniform motion of the speed may result, and since drive shafts exhibit some torsional flexibility, the mass of the prime mover and driven machine may induce a resonant system.

If the prime mover is an internal combustion engine, a highly flexible ARCUSAFLEx-VSK (short form: AC-VSK) U-joint coupling is required to protect the drive train from dynamic overload. Highly flexible AC-VSK U-joint couplings are capable of shifting resonant ranges below the lowest operating speed and of reducing resonance-induced vibratory torques under reversed stresses to tolerable levels.

The highly flexible AC-VSK U-joint coupling is mounted on the engine flywheel, ahead of the drive train with drive shaft. The AC-VSK U-joint coupling has an axial and radial integral bearing to accommodate the weight of the drive shaft and its reaction forces.

The AC-VSK coupling series is available in nine standard sizes covering a torque range from 3,450 to 177,000 lb-in (390 Nm to 20 000 Nm). REICH has an extensive range of couplings to cover nearly every drive configuration. Customized solutions can be developed and manufactured even in small batches or as prototypes. In addition calculation programs are available for all necessary dimensioning.

Application of the highly flexible ARCUSAFLEx-VSK U-joint couplings

For use with combustion engines in conjunction with drive shafts for splitter gearboxes, torque converters, ship gearboxes, control gears and pump drives, for example in drives of construction equipment, excavators, cranes, marine propulsion, locomotives, pump installations and dump trucks.

ARCUSAFLEx-VSK

Nominal torques from 3.450 to 177.000 lb-in
(390 Nm to 20 000 Nm)

ARCUSAFLEx-VSK

Advantages

The most important attributes and advantages of the highly flexible ARCUSAFLEx-VSK coupling are:

- Linear torsional deflection characteristic
- Elements available in different torsional stiffnesses
- Enhanced damping capacity through frictional damping
- Maintenance-free coupling bearings
- Radial bearing close to the cardan joint
- A variety of designs for different drive shaft configurations
- Many types with SAE connection dimensions or as specified
- Compact construction, the highly flexible element being protected by the housing
- Fail-safe device visible from the outside

ARCUSAFLEX-VSK

Technical Layout

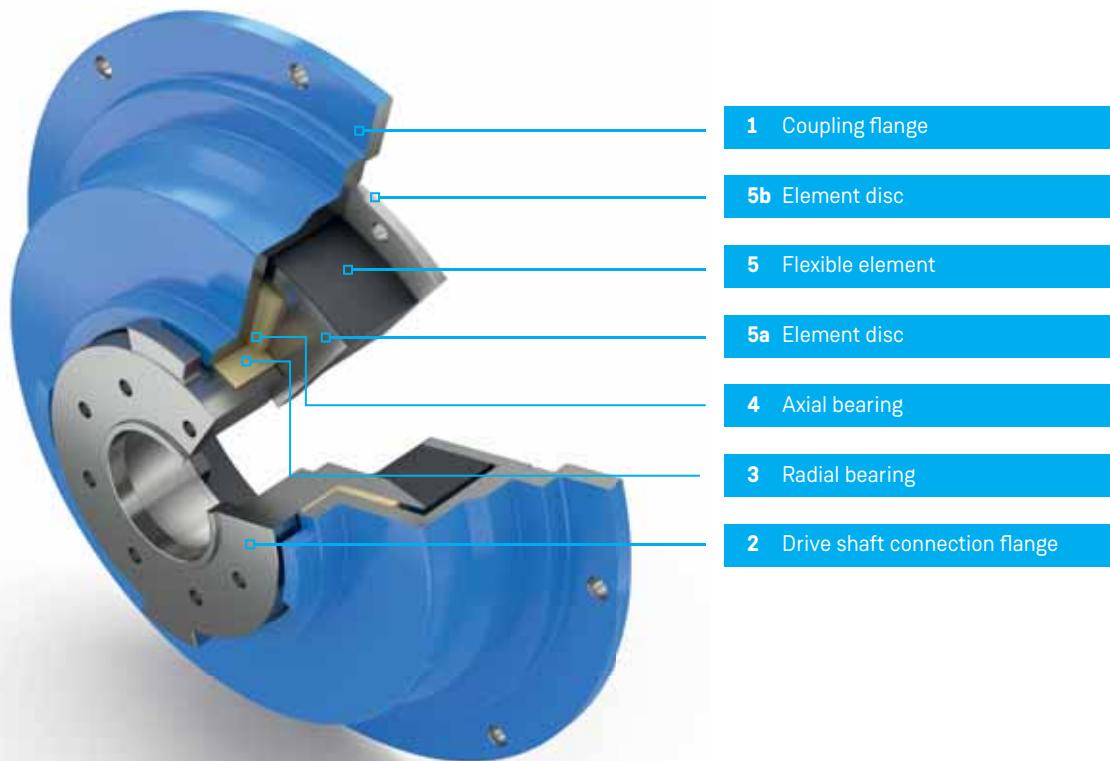

The highly flexible ARCUSAFLEX-VSK U-joint couplings of type AC-VSK F2 are specially designed for fitting to flywheels of internal combustion engines. The coupling flanges (1) of the standard type therefore match engine flywheels with SAE connecting dimensions.

The highly flexible coupling element (5), comprising a rubber/steel bond and is mounted with an axial pre-load acting on the thrust

bearing (4). The output side drive shaft flange (2), used to connect the drive shaft is precisely located by means of the radial bearing (3) ensuring excellent concentricity.

The pre-loaded rubber element improves the dynamic performance of the coupling by stabilizing the support bearings, providing enhanced damping capacity due to additional frictional damping.

ARCUSAFLEX-VSK layout and materials

i The coupling shown corresponds to the version with fail-safe device

ARCUSAFLEX-VSK

Materials

Materials Overview

Component	Designation	Material
1	Coupling flange	Standard design spheroidal cast iron EN-GJS-400-15
2	Drive shaft connection flange	Steel (yield strength min. 360 MPa)
3	Radial bearing	Plastic-metal composite or plastic (maintenance-free)
4	Axial bearing	Composite material
5	Flexible element	Rubber according to technical details
5a, 5b	Element discs	Steel

Technical Note

The technical data applies only to the complete coupling or the corresponding coupling elements. It is the customer's/user's responsibility to ensure there are no inadmissible loads acting on any of the components. In particular, existing connections, e.g. bolted connections, must be checked with regard to the torques to be transmitted. If necessary, further measures, such as additional reinforcement with pins, may be necessary. It is the customer's/user's responsibility to make sure the dimensioning of the shaft and keyed or other connection, e.g. shrinking or clamping connection, is correct.

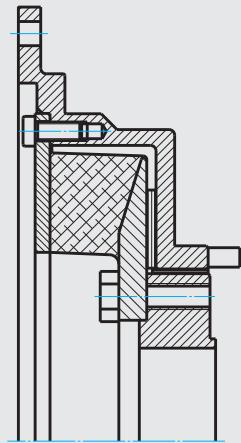

All components that can rust are protected against corrosion as standard.

REICH have an extensive range of couplings and coupling systems to cover nearly every drive configuration. Customized solutions can be developed and manufactured even in small batches or as prototypes. In addition calculation programs are available for all necessary dimensioning.

ARCUSAFLEX-VSK

Standard Types

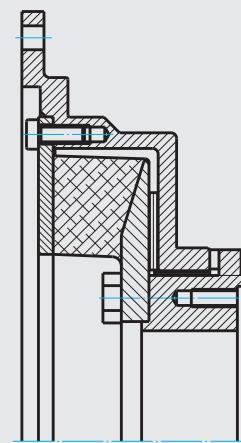

Type AC-VSK F2

Flange coupling

To connect an engine flywheel to a drive shaft with metric DIN flange.

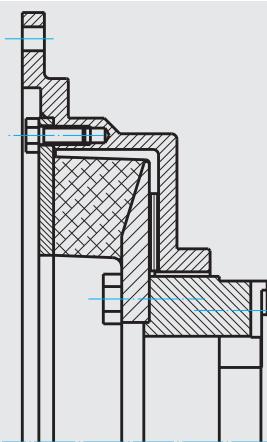

Type AC-VSK F2

Flange coupling

To connect an engine flywheel to a SPICER-drive shaft.

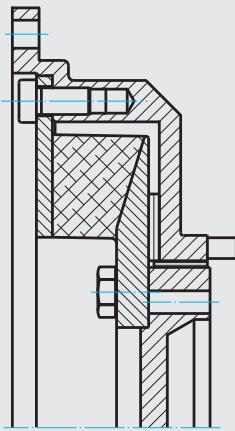

Type AC-VSK F2

Flange coupling

To connect an engine flywheel to a MECHANICS-drive shaft.

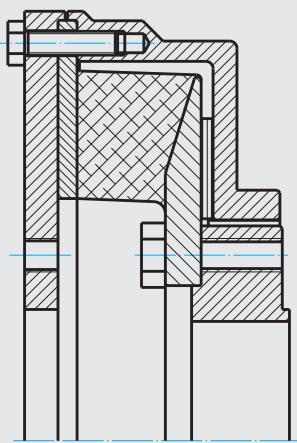

Type AC-VSK F2 CV

Flange coupling

To connect an engine flywheel to a **constant velocity shaft**.

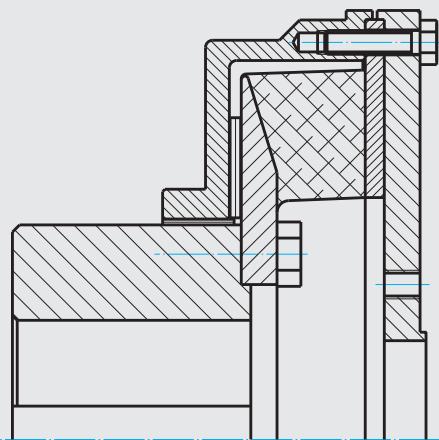

Type AC-VSK F1

Double flange coupling

To connect a **flange with drive shaft connection** to a drive shaft.

Type AC-VSK F1W

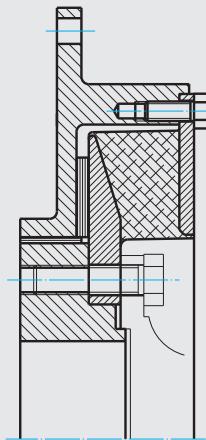

Shaft coupling

To connect a **shaft** to a drive shaft.

ARCUSAFLEX-VSK

Special types

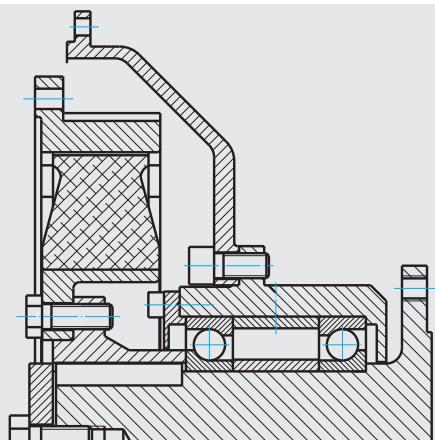

Short Type AC-VSK F2

Flange coupling

with narrow axial width, i.e. short installation length, for connecting an engine flywheel to a drive shaft.

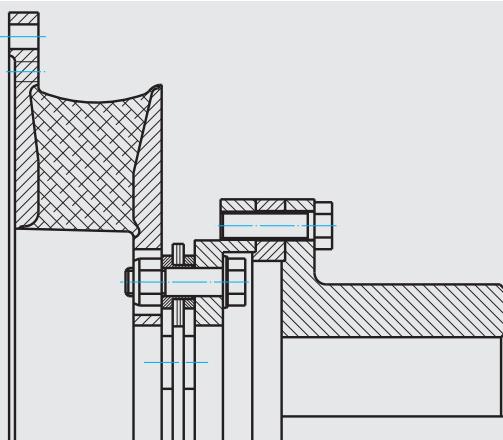

Type AC - F2 FG-GL

Flange coupling

Highly torsionally flexible ARCUSAFLEx® flange coupling with integral shaft support to connect a cardan shaft having a large deflection angle, also available with integrated clutch. A separate shaft bearing support attached to the engine housing keeps the crankshaft of the engine free from the additional stresses arising from cardan shaft deflection.

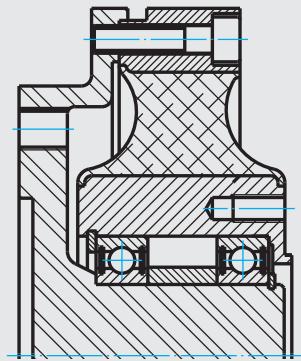

Type FD-VSK

AC with coupling housing

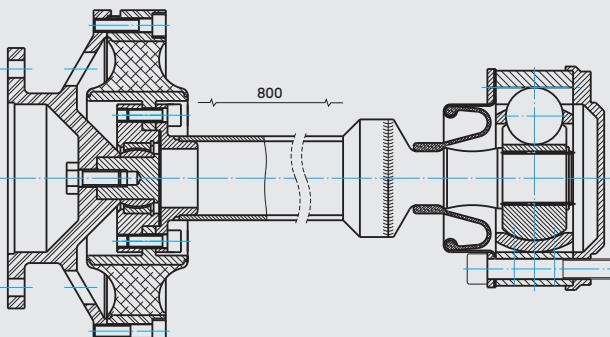

Highly torsionally flexible VSK coupling element in combination with FLEXDUR disc pack. To compensate for a large shaft displacement (e.g. with a flexibly mounted engine).

The coupling element compensates for the radial shaft displacement and the FLEXDUR disc pack compensates for the axial misalignment; for torques up to 247 821 lb-in.

Highly flexible torsionally optimized coupling

used in connection with a drive shaft, constant velocity shaft, flange or splined shaft profile. An extra catalog is available.

Highly flexible torsionally optimized coupling for engine test benches

Available designs: Integrated bearing with cardan shafts, integrated bearing with constant velocity shafts, double element coupling with/without telescopic unit.

i 1) The relative damping relates only to the elastomer. The frictional damping of the bearings has to be considered separately, depending on the type of operation

Shore hardness ShA, Resonance factor V_R and relative damping Ψ

Element version	Sh A	V _R	Ψ
EN	50	6.28	1.0
WN	55	5.03	1.25
NN	65	4.49	1.40

i Due to the physical properties of the rubber material, the measurable rubber hardness is subject to a variation that is defined as ± 5° Shore A according to DIN 53505. However, this variation is minimized by our own rubber production.

ARCUSAFLEX-VSK

Selection of the coupling size

The selected coupling for internal combustion engine drives should be verified by a torsional vibration analysis which we will provide on request. A preliminary selection of the coupling can, however, be made based on the continuous engine power being transmitted.

In selecting the coupling size the following should be satisfied:

- The **nominal torque of the coupling T_{KN}** must be taken into account at every temperature and operating load of the coupling, while observing the service factors S (e.g. temperature factor S_t) shall be at least equal to the maximum nominal torque on the drive side T_{AN} ; the temperature in the immediate vicinity of the coupling must be taken into account.

$$T_{KN} \geq T_{AN} \cdot S_t$$

- The **nominal torque on the drive side T_{AN}** is calculated with the driving power P_{AN} and the coupling speed n_{AN} :

$$T_{AN} [\text{Nm}] = 63.000 \frac{P_{AN} [\text{HP}]}{n_{AN} [\text{rpm}]}$$

- The **temperature factor S_t** allows for the decreasing load capacity of the coupling when affected by elevated ambient temperatures in the vicinity of the coupling.

Temperature t	140 °F	158 °F	176 °F	>176 °F
	60 °C	70 °C	80 °C	>80 °C
S_t	1.25	1.4	1.6	on request

- A continuous torsional vibration analysis to verify the coupling selection should confirm that the permissible **continuous fatigue torque T_{KW}** is at least equal to the highest fatigue torque T_W under reversing stresses encountered throughout the operating speed range while taking into account the temperature and frequency.

$$T_{KW} (10 \text{ Hz}) \geq T_W \cdot S_t \cdot S_f$$

- The **frequency factor S_f** allows for the frequency dependence of the permissible continuous fatigue torque under reversing stresses T_{KW} (10 Hz) with an operating frequency f_x :

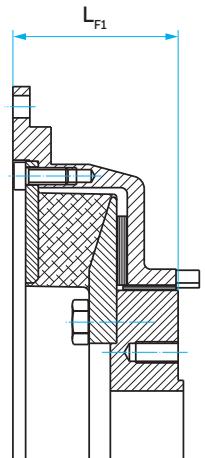

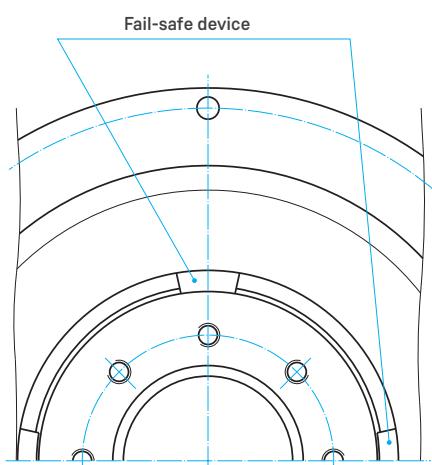

$$S_f = \sqrt{\frac{f_x}{10}}$$

ARCUSAFLEx-VSK

Data Required for Coupling Size Selection

General

- Project: _____
- Application (drive, generator, pump, etc.): _____
- Operating mode (continuous operation, main drive, auxiliary drive, etc.): _____
- Place of operation/location: _____ Ambient temperature: T_u [°C]
- Certification/class/requisite rules for selecting the coupling size: _____
- Fail-safe device? with without

Engine side

- Engine (manufacturer, designation/type): _____ Diesel Gas
- Engine power (nominal operation): P _____ [kW]
- Engine speed (nominal speed): n _____ [min⁻¹]
- Idling speed available? yes no
If adjustable from: n _____ [min⁻¹] to _____ [min⁻¹]
- If variable speed operation, speed range from: n _____ [min⁻¹] to _____ [min⁻¹]
① Please attach corresponding speed/torque/power diagram.
- Total stroke volume: V_H [ccm] R/V (angle): _____ Number of cylinders: _____
- Moments of inertia engine incl. damper without flywheel: J _____ [kgm²]
Moments of inertia flywheel: J _____ [kgm²]
Total moments of inertia of the engine (incl. damper, flywheel, etc.): J _____ [kgm²]

drive shaft

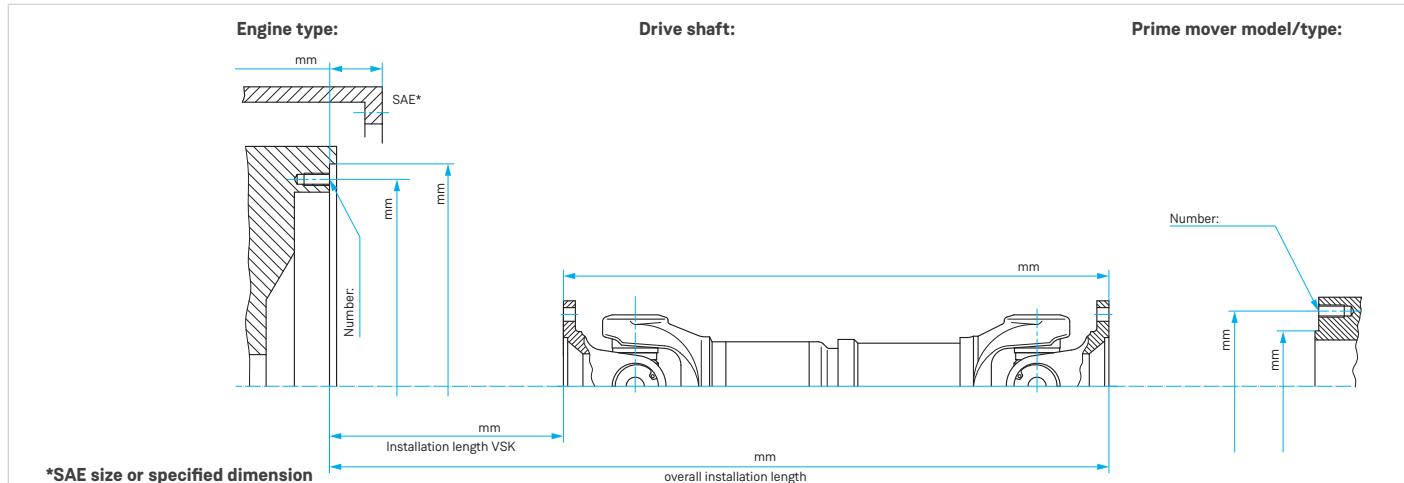

- Cardan shaft (DIN flange) SPICER drive shaft MECHANICS drive shaft constant velocity shaft
- Connection flange: _____
- Max.deflection angle of installed drive shaft: _____
- Moments of inertia drive shaft: J _____ [kgm²]

Output side

- Type (generator, pump transfer case, pump, compressor, ...): _____
- Type (manufacturer, designation): _____
- Moments of inertia: J _____ [kgm²]
- Connecting dimensions: _____

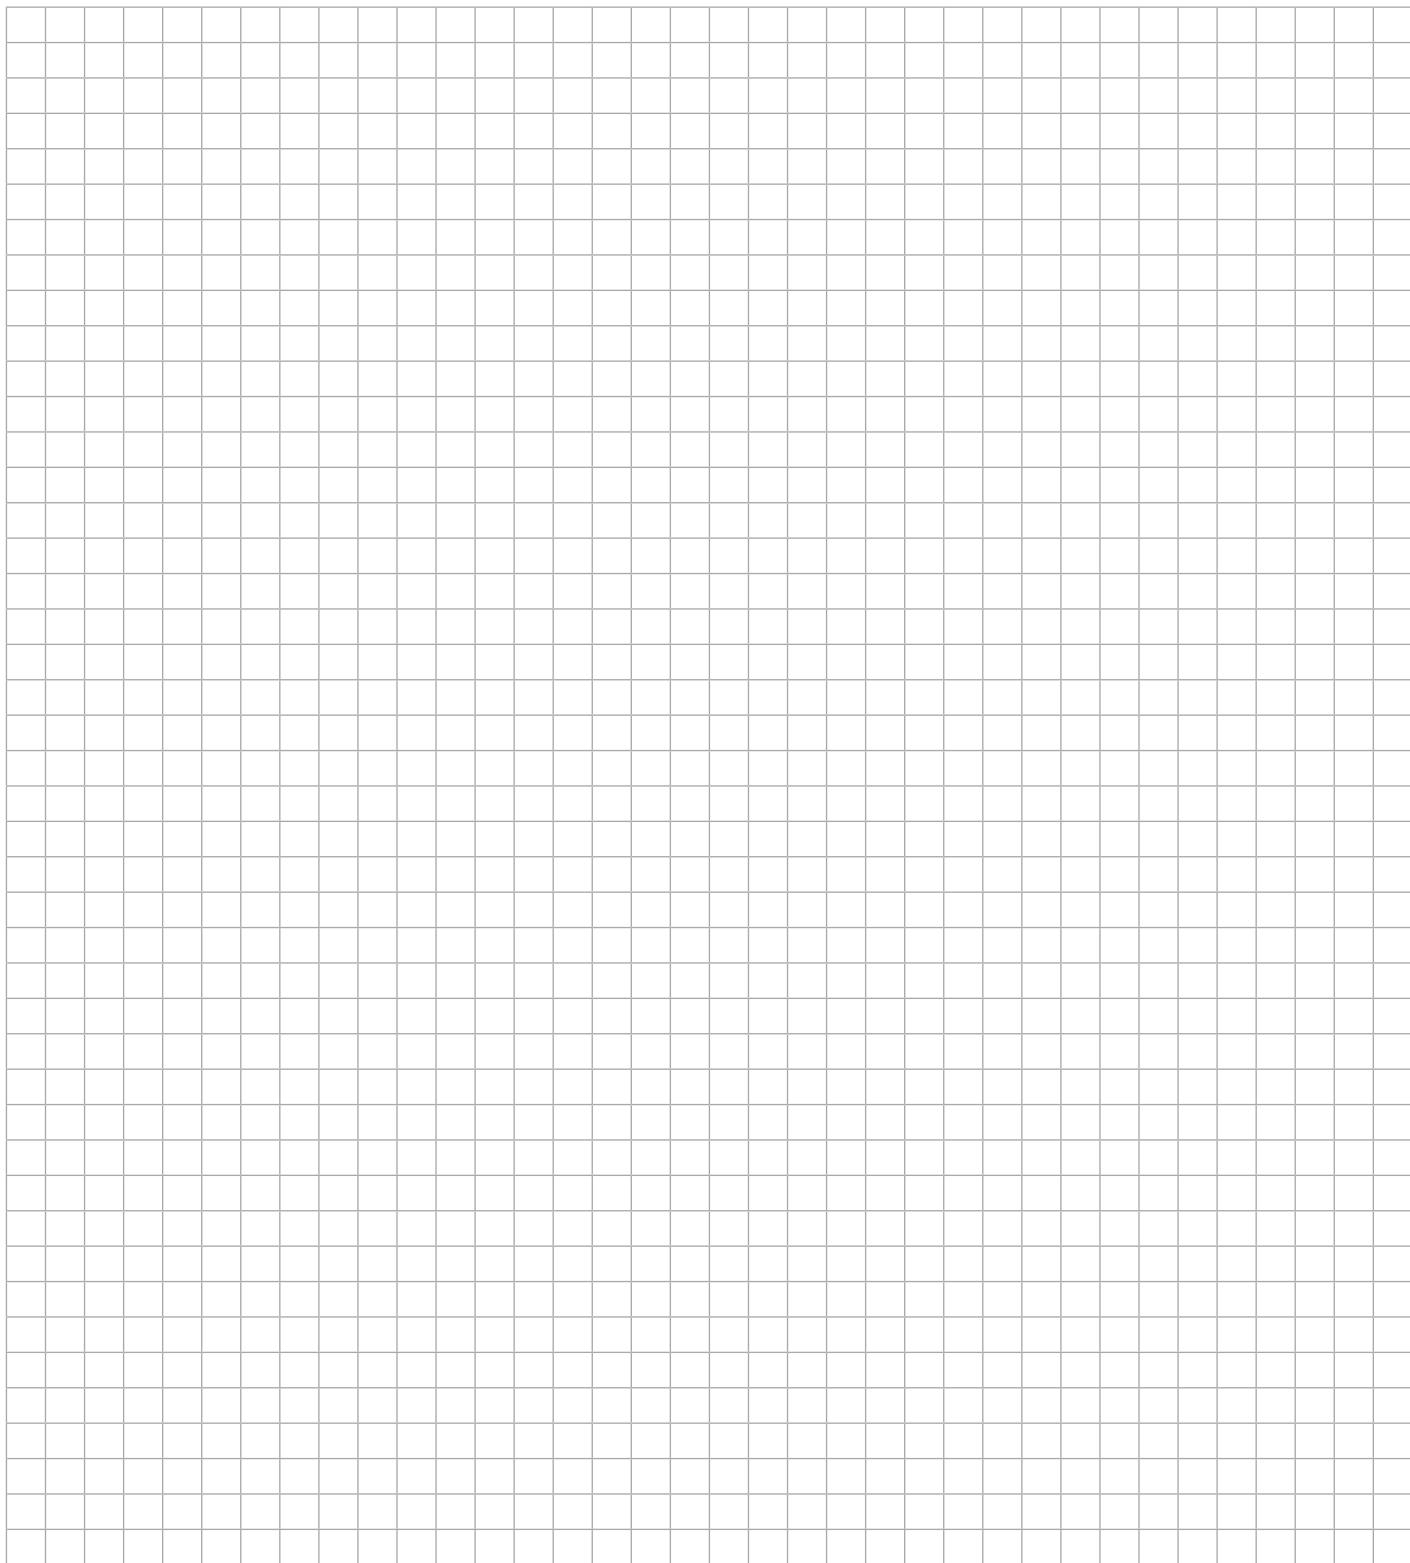

① For branched systems: System sketch with details of the individual inertias (with details of the reference speed) and transmission ratios.

Installation or mounting position and details of dimensions and details according to the following sketch:

ARCUSAFLEX-VSK

Notes

A large grid of squares, approximately 20 columns by 25 rows, intended for users to write notes or draw diagrams.

ARCUSAFLEx-VSK

SIMPLY POWERFUL. 

Industrial solutions:

-  Power generation
-  Mobile applications
-  Test benches
-  Pumps & compressors
-  Industry
-  Ship & port engineering

March 2020 edition

The present ARCUSAFLEx-VSK catalog edition renders parts of the previous ARCUSAFLEx-VSK catalogs obsolete. All dimensions in millimeters. We reserve the right to change dimensions and/or design without prior notice. Texts and illustrations, dimensional and performance data have been compiled with the utmost care. There is no guarantee, however, that the information is accurate; in particular, there is no guarantee that products will match the illustrations in terms of technology, color, shape and configuration or that the products will correspond to the proportions of the illustrations. We also reserve the right to make changes due to printing errors or mistakes.
